Your First Independent Project: Checklist

Requirements

Common

- All blocks from the brief are present. They display correctly in Google Chrome or Firefox.

- There is no horizontal scrollbar on desktop resolutions.

- The font is specified correctly.

HTML

- The layout matches the brief. The values of `margin` and `padding` properties may differ from the brief, but by no more than `30px`.

- Heading (`<h1>` - `<h6>`) and paragraph (`<p>`) elements are used instead of `<div>` for text elements.

- The image has an `alt` attribute with a short description of the picture as its value.

CSS

- Text elements don't have a fixed height.

- The `height` property is not used unnecessarily, i.e. it is only used if specified in the brief.

- The animation starts playing when the user hovers over any text area in the main section with the cursor.

Project rejected without review

- The project is sent for review without any changes to the code from the starter kit.
